SMART NEST BOX

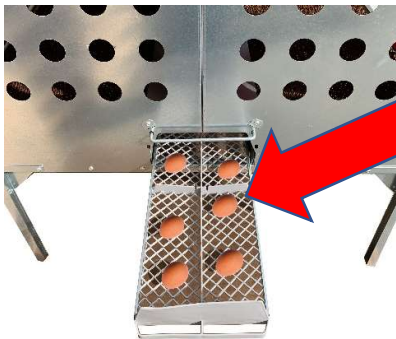

The new PPP Smart Nest Box shares most of the advantages of an automated roll-away system due to its unique design.

- Provides for maximum production of high-quality hatching eggs & commercial egg production
- Minimum cracks and hair cracks eggs
- Minimum floor eggs

No need to use potentially infectious nest bedding material!

Eggs only need to travel a short distance to the egg-belt, resulting in quick-cooling and a reduction in potential contamination.

The perforated egg-belt helps prevent eggs from cracking or breaking!

The egg collection-belt has a special design which prevents eggs from falling during collection.

A simple system prevents eggs from rolling out of the nest.

A gentle sloping nest bottom ensures the eggs roll onto the egg-belt quickly, keeping the eggs cool and clean.

The nest pad is made from AstroTurf. This allows dirt and manure to fall through, which keeps eggs nice and clean.

The Smart Nest Box can be closed in the evening so birds will not learn to sleep or brood in the nest.

Option to have adjustable height to suit specific stage of production.

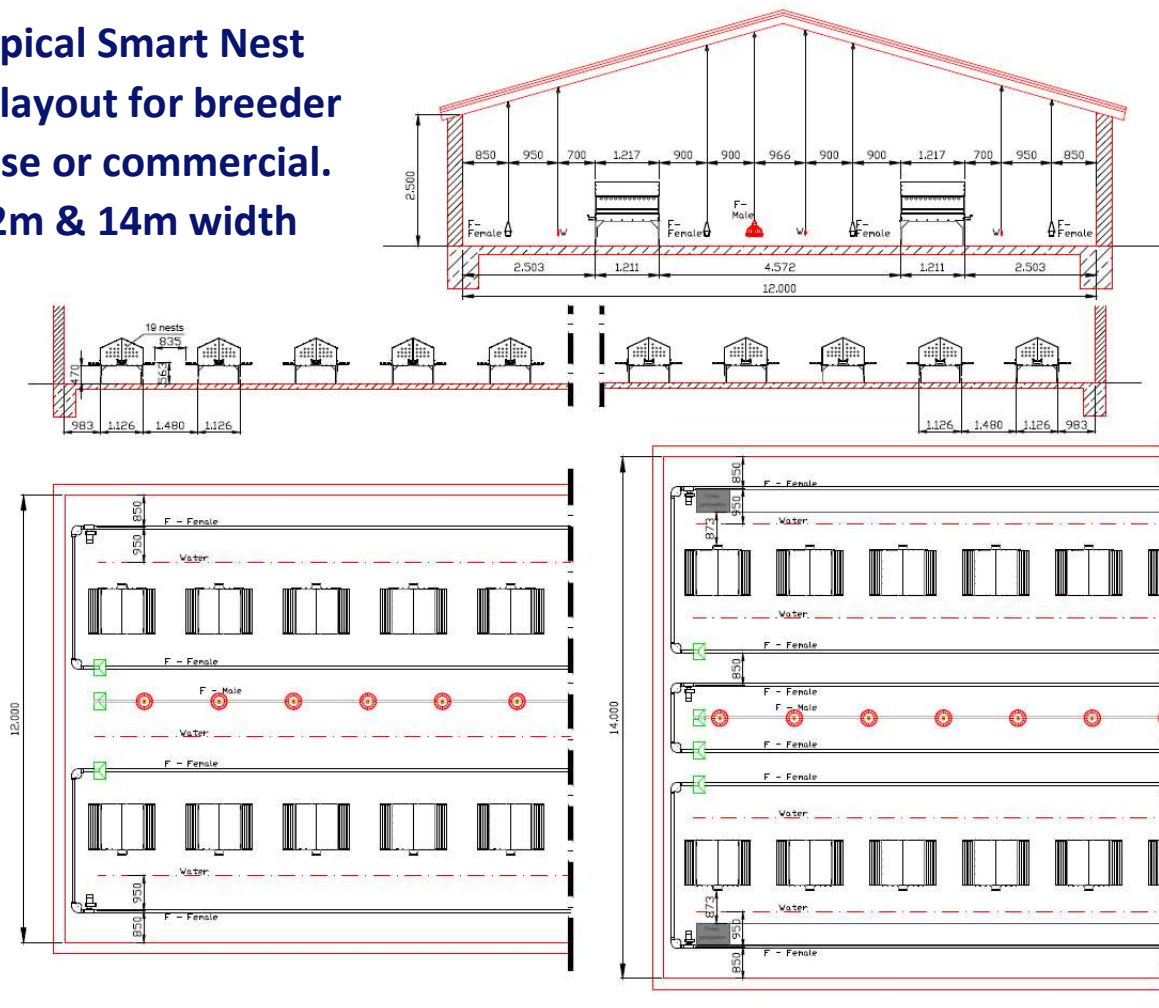

The Smart Nest Box can be automatized if needed.

Manufactured using high-quality steel.

Dimensions: 120cm x 120cm, egg belt 23cm wide.

**Typical Smart Nest
Box layout for breeder
house or commercial.
12m & 14m width**
